Parking Guidance Systems

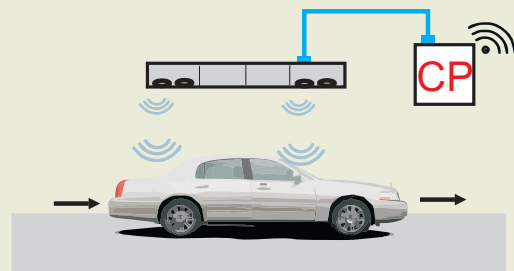

TCS Parking Guidance Systems use the latest technology to detect, monitor, and guide vehicles and motorists to available parking in the most efficient way possible. All of the TCS Parking Guidance System solutions can be integrated to meet any application and customer's requirements.

Our products are all compatible with the TCS Parking Guidance System software allowing the customer to view a graphical user interface displaying overall system operation, device status, and important statistical information.

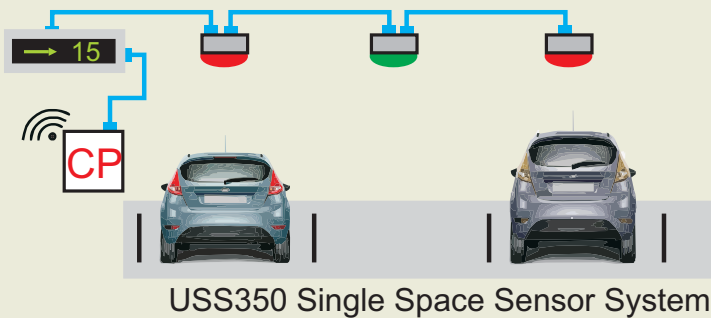

Wireless system communication eliminates the need for extensive cabling reducing costs and making our systems highly attractive for any type of customer application.

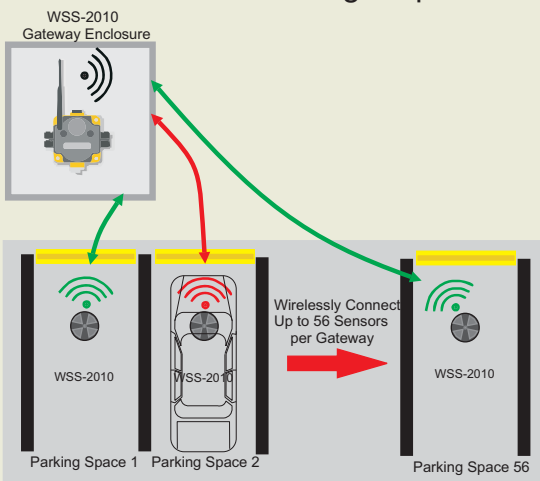

TCS Parking Guidance System Software

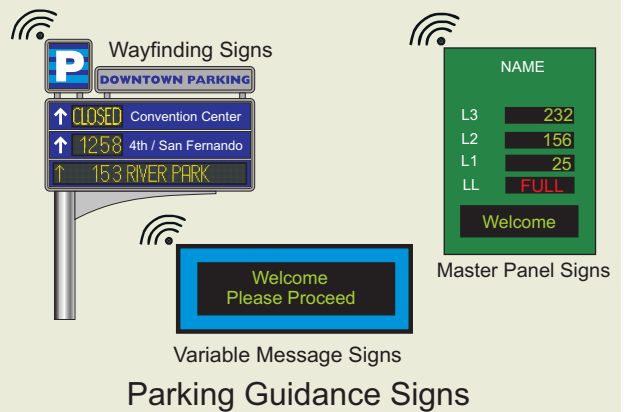

USDS300 Directional Sensor System

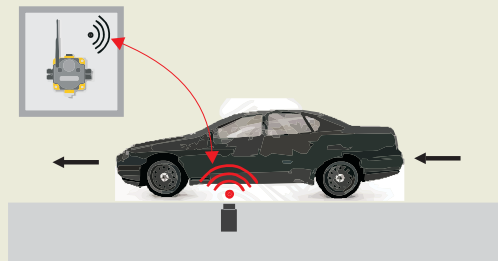

USS350 Single Space Sensor System
