

# TCS Web Interface Module

The TCS Web Interface Module is an optional add-on to the TCS Visual Control Center software. This module exports captured parking information to feed into web sites or mobile applications. These applications provide stress free parking for your customers by allowing them to save time, and plan parking in advance.

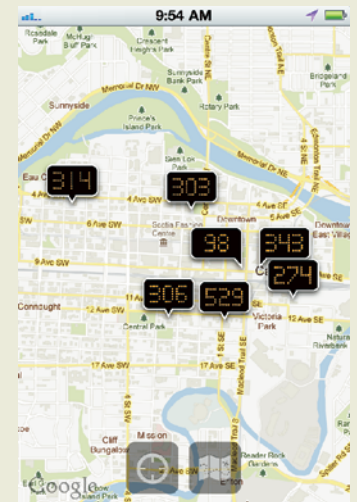

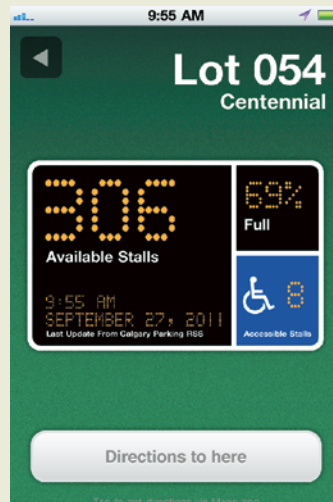

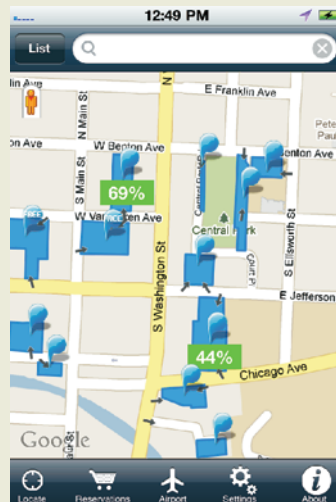

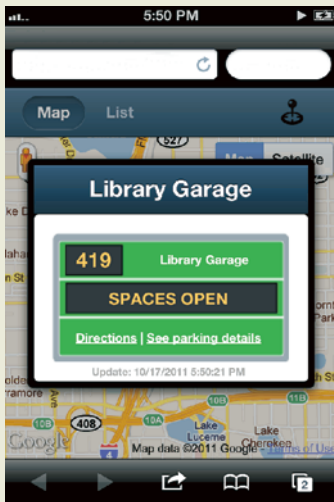

## Product Highlights

- Provides detail of total parking spaces in selected parking facilities
- Provides space availability by parker type (i.e. reserved, handicapped, etc.) based on equipment at facility
- Multiple file formats available. Inquire for details.

Real time parking information exported from the TCS Visual Control Center software via the Web Interface Module to a customer's existing official web site.
